ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

JERRY.SHORMA@HP.COM
mkraft@hp.com
ipa.mail@hp.com

Office Action Summary	Application No. 10/635,479	Applicant(s) WIECHERS, ALEJANDRO	
	Examiner Mark R. Milia	Art Unit 2625	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 November 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-4 and 10-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-4 and 10-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/13/08 has been entered. Currently, claims 1-4 and 10-20 are pending.

Response to Arguments

2. Applicant's arguments with respect to claims 1, 10, and 11 have been considered but are moot in view of the current amendment to the claims and therefore a new ground(s) of rejection will be made.

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Art Unit: 2625

4. Claims 1-2, 4, 10-12, and 14-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roztocil (US 2001/0044868) in view of Schorr (US 6,608,697) and Kemp (US 2001/0078160).

Regarding claim 1, Roztocil discloses a method of managing workflow in a commercial printing environment including a designer location and a print service provider location, said method comprising: establishing with a digital printer a closed-loop communication link between the designer location and the print service provider location (see Fig. 1 and paragraph 22, reference states that a digital print shop contains computer workstations **114** and **116**, servers **118** and **120**, and output devices **122** connected via network **112**; network **112** may include a plurality of networks types, such as wired, wireless, LAN, Ethernet, or WAN (Internet); print jobs are received and manipulated using computers **114** and **116** and as such makes up the designer location, reference also states that computers **114** and **116** maybe combined into one workstation; print server **120** and output devices **122** make up the print service provider location, therefore, communication between the computers **114** and **116** and server **120** and output devices **122** is established based on the output device (printer) selected by the user), sending from the digital printer current configuration information stored within memory of the digital printer to the designer location via the closed-loop communication link (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), creating a press ready file at the designer location using the current configuration information received from the digital printer via the closed-loop communication link (see Fig. 1 and paragraphs 23, 25, and 27-28, reference states that output device availability and

Art Unit: 2625

capabilities provided to a user and are utilized in print job fulfillment, and also states that “print ready” files are created at the designer location, computers **114** and **116**, during job preparation which takes output device attributes into consideration), submitting the press ready file from the designer location to the print service provider location via the closed-loop communication link (see paragraphs 22 lines 8-13, 25 lines 9-11, 29, and 32 lines 22-26) and receiving at the print service provider location a printed output of the press ready file from the digital printer (see Fig. 1 and paragraphs 29-30, 33 lines 2-4, 45-48, and 56).

Roztocil does not disclose expressly automatically checking for common errors associated during a prepress stage by automatically pre-flighting the document to be printed, automatically revising incorrect printing instructions and adding missing printing instructions, automatically providing a remote proofing function for a customer of the document to be printed and automatically tracking the printing of the document by continuously monitoring and updating a status of the document to be printed, and packaging the printed output at the print service provider location using an automated packaging device.

Schorr discloses automatically checking for common errors associated during a prepress stage by automatically pre-flighting the document to be printed (see Fig. 1A **101** and column 8 lines 6-18), automatically revising incorrect printing instructions and adding missing printing instructions (see column 8 lines 15-18, print vendor **117** corrects errors), automatically providing a remote proofing function for a customer of the document to be printed and automatically tracking the printing of the document by

Art Unit: 2625

continuously monitoring and updating a status of the document to be printed (see column 8 line 19-column 9 line 53 and column 12 lines 33-50, a customer can use a web page interface to track the progress of the print job along with associated errors or lack thereof).

Kemp discloses packaging the printed output at the print service provider location using an automated packaging device (see Fig. 9 and paragraphs 41 and 64, reference states that service provider **2** may include equipment for various finishing processes, such as a specific type of binding which is a type of packaging and it can be seen that the equipment is meant to automatically finish (bind) the document. The reference further states after printing and finishing are completed that a user can have the document(s) delivered or held for pick-up).

Regarding claim 10, Roztocil discloses a device for use with a design-to-press workflow in a commercial printing environment including a designer location, a print service provider location and a closed-loop communication link between them, said device comprising: a memory for storing current configuration information about the device (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52) and a communication module for connecting to the closed-loop communication link to communicate the current configuration information to the designer location and the print service provider location for consideration in design and preflight stages of the workflow (see Fig. 1 and paragraphs 23, 25, 27-28, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52, reference states that output device availability and capabilities provided to a user and are utilized in print job fulfillment, and also states that “print ready” files are

Art Unit: 2625

created at the designer location, computers **114** and **116**, during job preparation which takes output device attributes into consideration).

Roztocil does not disclose expressly a preflight module configured to automatically check for common errors associated during a prepress stage by automatically pre-fighting the document to be printed, a revision module configured to automatically revise incorrect printing instructions and add missing printing instructions, a remote proofing module configured to automatically provide a remote proofing function for a customer of the document to be printed and configured to automatically track the printing of the document by continuously monitoring and updating a status of the document to be printed, and an automated packaging device.

Schorr discloses a preflight module configured to automatically check for common errors associated during a prepress stage by automatically pre-fighting the document to be printed (see Fig. 1A **101** and column 8 lines 6-18), a revision module configured to automatically revise incorrect printing instructions and add missing printing instructions (see column 8 lines 15-18, print vendor **117** corrects errors), a remote proofing module configured to automatically provide a remote proofing function for a customer of the document to be printed and configured to automatically track the printing of the document by continuously monitoring and updating a status of the document to be printed (see column 8 line 19-column 9 line 53 and column 12 lines 33-50, a customer can use a web page interface to track the progress of the print job along with associated errors or lack thereof).

Kemp discloses packaging the printed output at the print service provider location using an automated packaging device (see Fig. 9 and paragraphs 41 and 64, reference states that service provider **2** may include equipment for various finishing processes, such as a specific type of binding which is a type of packaging and it can be seen that the equipment is meant to automatically finish (bind) the document. The reference further states after printing and finishing are completed that a user can have the document(s) delivered or held for pick-up).

Regarding claim 11, Roztocil discloses a system for managing workflow in a commercial printing environment, said system comprising: a digital printer comprising memory that stores current configuration information about the digital printer and a communications module that is used to communicate with other devices over a network (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), wherein the digital printer is configured to: establish a closed-loop communication link with a designer location at which print jobs are created and with a print service provider location at which the print jobs are processed (see Fig. 1 and paragraph 22, reference states that a digital print shop contains computer workstations **114** and **116**, servers **118** and **120**, and output devices **122** connected via network **112**; network **112** may include a plurality of networks types, such as wired, wireless, LAN, Ethernet, or WAN (Internet); print jobs are received and manipulated using computers **114** and **116** and as such makes up the designer location, reference also states that computers **114** and **116** maybe combined into one workstation; print server **120** and output devices **122** make up the print service provider location, therefore, communication between the computers

Art Unit: 2625

114 and **116** and server **120** and output devices **122** is established based on the output device (printer) selected by the user), send the current configuration information stored within digital printer memory to the designer location via the closed-loop communication link (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), and generate printed outputs associated with the print jobs (see paragraphs 22 lines 8-13, 25 lines 9-11, 29, and 32 lines 22-26), and a device comprising memory that stores current configuration information about the device and a communications module that is used to communicate with other devices over a network (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52), wherein the digital printer is configured to: communicate over the closed-loop communication link with the designer location and with the print service provider location, send the current configuration information stored within the device memory to the designer location via the closed-loop communication link (see paragraphs 23, 32 lines 22-26, 45 lines 1-6, 46 lines 1-16, and 52, reference states that output device availability and capabilities provided to a user and are utilized in print job fulfillment, and also states that “print ready” files are created at the designer location, computers **114** and **116**, during job preparation which takes output device attributes into consideration).

Roztocil does not disclose expressly a preflighting device in communication with the digital printer and comprising a revision module and a remote proofing module configured to: automatically check for common errors associated during a prepress stage by automatically pre-flighting the document to be printed, automatically revise incorrect printing instructions and add missing printing instructions, automatically

Art Unit: 2625

provide a remote proofing function for a customer of the document to be printed and configured to automatically track the printing of the document by continuously monitoring and updating a status of the document to be printed, and an automated packaging device to package the printed outputs generated by the digital printer according to the instructions associated with the print job.

Schorr discloses a preflighting device in communication with the digital printer and comprising a revision module and a remote proofing module configured to: automatically check for common errors associated during a prepress stage by automatically pre-flighting the document to be printed (see Fig. 1A **101** and column 8 lines 6-18), automatically revise incorrect printing instructions and add missing printing instructions (see column 8 lines 15-18, print vendor **117** corrects errors), automatically provide a remote proofing function for a customer of the document to be printed and configured to automatically track the printing of the document by continuously monitoring and updating a status of the document to be printed (see column 8 line 19-column 9 line 53 and column 12 lines 33-50, a customer can use a web page interface to track the progress of the print job along with associated errors or lack thereof).

Kemp discloses an automated packaging device to package the printed outputs generated by the digital printer according to the instructions associated with the print job (see paragraphs 40-41 and 64, reference states that service provider **2** may include equipment for various finishing processes, such as a specific type of binding which is a type of packaging and it can be seen that the equipment is meant to automatically finish

Art Unit: 2625

(bind) the document. The reference further states after printing and finishing are completed that a user can have the document(s) delivered or held for pick-up).

Roztocil, Schorr, & Kemp are combinable because they are from the same field of endeavor, printing based on printer capabilities.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine the pre-flight automatic checking and correcting of common errors for a document to be printed, as described by Schorr, and the packaging device, as described by Kemp, with the system of Roztocil.

The suggestion/motivation for doing so would have been to reduce the need to reprint a document due to an error than could have been easily corrected prior to actual printing, thereby saving printer resources and increasing system efficiency, and to enable a user to receive his/her document(s) when, how, and where they desire to increase overall system efficiency and enhance user operability.

Therefore, it would have been obvious to combine Schorr and Kemp with Roztocil to obtain the invention as specified in claims 1, 10, and 11.

Regarding claims 2 and 12, Kemp further discloses wherein the automated packaging device is a Design-to-Ship enabled packaging device that also forms part of the closed-loop communication link (see Fig. 9 and paragraphs 41 and 64).

Regarding claim 4, Roztocil further discloses verifying at the print service provider location that the press ready file will be produced at the print service provider location as instructed by information contained in the press ready file and, if not,

Art Unit: 2625

correcting the press ready file to ensure production substantially as designed (see paragraphs 29-30, 45-48, and 56).

Regarding claim 14, Kemp further discloses wherein the digital printer sending current configuration information comprises the digital printer sending a table containing the current configuration information to the designer location (see paragraph 84).

Regarding claim 15, Roztocil further discloses wherein creating a press ready file at the designer location comprises adjusting at the designer location a print job to match capabilities of the digital printer relative to the current configuration information for the printing device (see Fig. 1 and paragraphs 29-30, 33 lines 2-74, 45-48, and 56).

Regarding claim 16, Roztocil further discloses the designer location updating a job ticket associated with the print job (see Fig. 1 and paragraphs 29-30, 33 lines 2-74, 45-48, and 56).

Regarding claim 17, Roztocil further discloses a preflight module of the print service provider location receiving the press ready file, reading the updated job ticket, requesting from the digital printer the current configuration information via the closed-loop communication link, and determining whether or not the digital printer is capable of properly processing the print job by comparing information contained in the updated job ticket and the current configuration information of the digital printer (see Fig. 1 and paragraphs 29-30, 33 lines 2-74, 45-48, and 56).

Regarding claim 18, Roztocil further discloses the preflight module providing the print job and updated job ticket to the digital printer (see paragraphs 46-48).

Regarding claim 19, Roztocil further discloses the digital printer reading the updated job ticket and verifying that the digital printer can process the print job according to instructions contained in the updated job ticket (see paragraphs 46-48).

Regarding claim 20, Roztocil further discloses the digital printer providing updates as to printing status to the designer location and the print service provider location via the closed-loop communication link (see paragraph 45 lines 1-6).

5. Claims 3 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roztocil, Schorr, and Kemp.

Roztocil, Schorr, and Kemp do not disclose expressly wherein the automated packaging device is assigned a unique identifier.

However, it is well known in the art for printers, finishing/packaging devices to have unique identifiers, such as IP addresses, URLs, MAC addresses, etc. to allow the device to be identified and allow data to be easily transferred to and from the device. Therefore, at the time of the invention, it would have been obvious to a person of ordinary skill in the art to assign a unique identifier to the automated packaging device of Kemp because it would allow the device to be easily and accurately identified and also allow data to be easily and accurately transferred to the device.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. To further show the state of the art please refer to the attached Notice of References Cited.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark R. Milia whose telephone number is (571)272-7408. The examiner can normally be reached M-F 8:00am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Moore can be reached at (571) 272-7437. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
